Reasons for Allowance

1. Claims 1-19, 21 and 23-28 are allowed.
2. The following is an examiner's statement of reasons for allowance:

While Nagashima (U.S. Patent No. 6,275,988) discloses an image transmission system which processes hierarchically encoded image information, comprising traffic checking means for checking a traffic of a transmission line for transmitting the hierarchically encoded image information, resolution selection means for selecting a resolution of an image to be transmitted in correspondence with the checking result, accounting means for performing accounting processing in correspondence with the selected resolution of image information, information volume measuring means for measuring a volume of the image information, charge storage means for storing a charge of the image information calculated by the accounting means, and payment means for paying the charge of the image information at predetermined time intervals. Nagashima does not teach intermediate documents are hierarchically structured according to a total number of pages contained in each of the intermediate documents; assigning each of the number of intermediate documents an information level based on the number of pages contained therein; and other limitations related to these features in combination with the remaining elements and features of the claimed invention.

And Pekowski (U.S. Patent No. 6,557,007) discloses a convention processing system includes a database operable to store show information identifying at least one show in which a plurality of exhibitors will exhibit their wares, service information identifying a plurality of services available to the exhibitors at the show, supplier information identifying at least one supplier for each service and a plurality of suppliers for at least one service, and at least one item

Art Unit: 2121

for each service, the item identifying a particular type of the service, a price for the item and a supplier for the item. The database structure may be organized in a hierarchy with shows at the top, followed by divisions in each show, followed by services and accounts in each division, wherein services may further subdivided into one or more items for each suppliers. Pekowski does not teach intermediate documents are hierarchically structured according to a total number of pages contained in each of the intermediate documents; assigning each of the number of intermediate documents an information level based on the number of pages contained therein; and other limitations related to these features in combination with the remaining elements and features of the claimed invention.

The prior art of record fails to teach or fairly suggest to one of ordinary skill in the art at the time of the invention, in conjunction with all the other claimed limitations, an information providing method and system having all the claimed features of applicant's instant invention, specifically including: intermediate documents are hierarchically structured according to a total number of pages contained in each of the intermediate documents; assigning each of the number of intermediate documents an information level based on the number of pages contained therein, etc., as set forth in the claims.

Also, there is no motivation to combine the Nagashima reference with the Pekowski reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
